**DETAILED ACTION**

***Priority***

1. Receipt is acknowledged of papers submitted under 35 U.S.C. 119(a)-(d), which papers have been placed of record in the file.

***Claim Rejections - 35 USC § 102***

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

3. Claims 1-18 are rejected under 35 U.S.C. 102(b) as being anticipated by Ote et al. (Ote) (US 5,815,652).

With regard to claims 1 and 13, Ote discloses a control system for a printing machine having at least one machine element, the control system comprising: a central data processing unit; an electronic machine controller connected to and controlled by said central data processing unit; at least one controlled machine element of the printing a machine connected to and controlled by said electronic machine controller; a data carrier, an input device, and an output device connected to said central data processing unit; said data carrier storing at least one data file for playing back instructions associated with at least one machine element, one machine function, and/or a functional or setting error; and wherein the at least one data file is activatable via said

Art Unit: 2622

central unit such that, upon activation of the file, the instructions are played back via the output device (col 4, line 46 – col 5, line 42).

With regard to claim 2, Ote also discloses wherein said data carrier is a memory device of said central data processing unit (col 10, lines 13-37).

With regard to claim 3, Ote discloses wherein the instructions are selected from the group consisting of optical and acoustical help instructions, and said output device is selected from the group consisting of optical and acoustical output devices (which reads on optical since the instructions are displayed) (col 7, lines 17-46).

With regard to claim 4, Ote also discloses wherein the data file is selected from the group consisting of audio, video, HTML, and image files (which reads on video since it is displayed) (col 7, lines 17-46).

With regard to claim 5, Ote also discloses wherein said output device is selected from the group consisting of screen display and speaker (col 7, lines 17-46).

With regard to claim 6, Ote also discloses wherein the input device is selected from the group consisting of touch-sensitive and light-sensitive input devices (managing computer 23 would be equipped with a input device).

With regard to claim 7, Ote also discloses wherein the input device is selected from the group consisting of a screen, a film, a keyboard, and a sensor (managing computer 23 would be equipped with a input device).

With regard to claim 8, Ote also discloses wherein the files are activatable before, during, and after a setting of the machine controller (col 4, line 46 – col 5, line 42).

With regard to claim 9, Ote also discloses wherein said central unit is programmed to activate a particular associated file in the event of a functional or setting error of a machine element or a machine function (col 4, line 46 – col 5, line 42).

With regard to claim 10, Ote also discloses wherein said central unit is programmed to automatically activate a particular associated file in the event of a functional or setting error of a machine element or a machine function (col 4, line 46 – col 5, line 42).

With regard to claim 11, Ote also discloses wherein said central unit is configured to recognize errors in the machine controller, to detect an error of a machine element, and to activate the particular associated file (col 4, line 46 – col 5, line 42).

With regard to claim 12, Ote also discloses wherein said central unit is configured to detect functional errors and setting errors of the machine element (col 4, line 46 – col 5, line 42).

With regard to claim 14, Ote also discloses wherein the error recognition procedure is a software procedure in the central unit (col 4, line 46 – col 5, line 42).

With regard to claim 15, Ote also discloses when an erroneous setting is detected, automatically forwarding a signal to the central unit, and thereupon activating, with the central unit, the file associated with the applicable machine function or machine element (col 4, line 46 – col 5, line 42).

With regard to claim 16, Ote also discloses which comprises forwarding with input means upon actuation a signal to the central unit; thereupon checking with the

Art Unit: 2622

central unit a machine status for active machine functions or machine elements, and activating a respectively file associated therewith (col 4, line 46 – col 5, line 42).

With regard to claim 17, Ote also discloses effecting an input under menu control via an input device (managing computer 23 would be equipped with a input device).

With regard to claim 18, Ote also discloses wherein the input device is a screen display (managing computer 23 would be equipped with a display screen; col 7, lines 17-46).
